Women Who Master — Individual GenAI Hackathon Submission

**Submitted by: [Shruti Somvanshi] | Registration/Roll number: [WWM26-NOI-G-T028-M03]
| Location: [Noida]**

Rural Women Entrepreneurs Need Better Business Decisions

The Problem

- Rural women possess valuable skills, local knowledge and distinctive products — but lack access to reliable business guidance, market information and digital tools
- They face critical questions:
*Is there sufficient demand?
Who will buy? What should I produce and at what price?
Can this remain profitable?*

The Opportunity

Design a GenAI venture navigator that helps a rural woman entrepreneur:

- Examine a business idea using available evidence
- Make **one practical, defensible next decision**
- Receive guidance tailored to her product, location, experience and goal

Open Agent Ctrl+E

Target Entrepreneur & Solution

Who She Is

A rural woman running a small home-based or local product/service business — a pickle maker, weaver, dairy farmer, food producer, artisan or service provider.

She has **skills, experience and local resources** but limited access to business guidance, market data and digital tools.

Nari Preneurship

An AI-powered business companion that:

- Collects simple, structured information about her and her business
- Converts that into personalized, practical business recommendations
- Helps her understand customers, pricing, market opportunities and next steps
- Designed for regional-language interaction and limited digital experience

Nari Preneurship: Core Workflow

<https://partyrock.aws/u/shrutisom/Kzruvlrzg/NariPrenaur> - partyRock Link

A guided, conversational interface walks each entrepreneur through four simple steps — transforming her real context into a personalized, actionable business recommendation within minutes.

GenAI Workflow & System Design

● Claude Haiku — Fast & Efficient

Powers 5 focused analysis widgets:

- 🔍 **Your Business Opportunity** — identifies market gaps and growth potential
- 🛒 **Will Customers Actually Buy** — validates demand from context
- 💰 **Know Your Real Profit** — unit economics and margin calculation
- 🗺️ **Where Should You Sell** — compares direct, retail, online, collective
- ⚠️ **What Could Go Wrong** — rural-specific risk identification
- 🤝 **What Support Could Help** — training, credit, equipment, market links

● Claude Sonnet — Deep Reasoning

Powers 2 synthesis widgets:

- 🧠 **Your Next Business Decision** — synthesizes all evidence into one recommended action
- 📄 **Your Rural Venture Decision Card** — one-page actionable summary

🎨 Stable Image Core v1.1

Generates hero imagery for visual engagement and accessibility branding.

Mandatory Progress Evidence — 10:00 AM

Early Build: Entrepreneur Profiling & Business Information Collection

The screenshot displays the WHISKERS app interface within a web browser. The app is titled "new-app-Kzruvrlzg" and features a "Play App" button. The main content area is titled "Nari Entrepreneur" and "NARI ENTREPRENEUR". Below this, it says "From Local Skills to Better Business Decisions" and "Your simple AI business companion for rural women entrepreneurs". A descriptive text states: "This app helps you turn your skills, experience and resources into practical, evidence-based business decisions — step by step." The form contains several input fields with pre-filled or suggested values:

Field	Value
Name	Shruti
Age	29
Location	old delhi
Product or Service	embroidy
Experience	2 years
Current Production	2-3
Current Customers	local

A sidebar on the left contains various icons, and a top bar includes a "Whiskers" logo and a "Flow" button. A system tray at the bottom shows the date and time as 08-09-2025, 10:39.

What Was Built

Completed the core data collection workflow. The interface guides users through structured questions about themselves and their business.

- **Bilingual support** (Hindi/English) for regional accessibility
- **Simple, guided language** for users with limited digital experience
- Structured inputs: name, age, location, product, customers, production volume, experience, goal
- Foundation for all downstream AI analysis

📄 Data quality at this stage determines the quality of every recommendation downstream.

What Changed

Integrated Claude AI models to generate fully personalized business analysis. The system now produces context-specific insights for each entrepreneur.

- ✓ Opportunity identification based on product, location and experience
- ✓ Demand validation tailored to her actual customer base
- ✓ Pricing recommendations with visible assumptions
- ✓ Actionable next steps in entrepreneur's preferred language

Add co

Both Claude Haiku (5 focused widgets) and Claude Sonnet (decision synthesis) are active and generating real outputs.

Claude Haiku — Fast Analysis

"Based on this entrepreneur's product, customers and experience, what are the top 3 business opportunities she should explore?"

"Calculate the real cost per unit including raw materials, labour, packaging, transport and spoilage. What price achieves 40% margin?"

Refinement: Prompts adjusted to include rural market dynamics, seasonal demand and local supply chains — to eliminate generic advice.

Claude Sonnet — Deep Reasoning

"Synthesize all evidence. Recommend ONE of: Proceed, Pilot, Modify, Collaborate, Test Further, or Pause. Clearly separate facts, assumptions, missing evidence and reasoning."

"Generate a one-page Rural Venture Decision Card: entrepreneur context, customer/problem, evidence, cost/price/margin, break-even, recommended channel, risks, decision and 30-day plan."

Refinement: Prompts structured to enforce separation of verified facts from assumptions — ensuring transparency and defensibility.

Stable Image Core v1.1 — Visual Branding

"A rural Indian woman entrepreneur in her home workspace, surrounded by her handmade products, looking confident and thoughtful. Warm, natural lighting. Realistic photography style."

Purpose: Hero image for NariPreneurship branding — visual engagement and accessibility for regional users.

 Scenario 1: Pickle Producer (Delhi)

Smriti, 22, 3 yrs exp., goal: increase sales

-  Expand to 500–1500 units/month via retailers & online
-  "3 loss-making days per 14-day cycle = untapped demand"
-  Pricing: 500–1500 INR/jar based on cost structure

Finding: Personalization works — recommendations shifted by product, location and experience.

 Scenario 2: Weaver / Artisan

5+ yrs exp., limited market reach, goal: new markets

-  Institutional buyers and online platform validation
-  Artisan labour and material pricing strategy
-  Collective sales / online marketplace route-to-market

Finding: Different product type = different recommendations (collective action vs. volume scaling).

 Scenario 3: Seasonal Food Producer

3 yrs exp., local community, goal: increase income

-  Seasonality flagged as primary business risk
-  Complementary off-season product development
-  Storage/preservation strategies to extend sales window

Finding: Context-specific risks surfaced and mitigated appropriately.

 Scenario 4: New Entrepreneur

1 yr informal exp., known customers, goal: start & grow

-  Clear, simplified opportunity definition
-  Basic cost structure and beginner-friendly pricing
-  Recommendation: "**Pilot**" — small market test before scaling

Finding: Accessibility works — early-stage guidance matched to entrepreneur's stage.

 Privacy & Consent

- Data collected with explicit consent; stored securely
- No personal data shared with third parties without permission
- Users can request data deletion at any time

 Bias & Exclusion

- AI trained to recognize regional market variations and product types
- Recommendations account for gender and social dynamics affecting rural market access
-  • System explicitly flags when data is insufficient to make a confident recommendation

 Accuracy & Harmful Outputs

- All financial calculations shown with underlying assumptions — users can verify and adjust
- System separates **verified facts** from **assumptions** to prevent false confidence
- "Test Further" and "Pilot" options recommended when evidence is incomplete

 Security & Misuse

- No direct access to credit or financial products — only pathway recommendations
- All scheme/grant/lender information verified and accompanied by source and eligibility conditions
- Users advised to seek independent verification before committing resources

 Transparency & Human Oversight

- Every recommendation includes clear reasoning: facts, verified information, assumptions, calculations and missing evidence
- Rural Venture Decision Card explicitly separates these elements for entrepreneur and advisor review
- System supports human decision-making — **entrepreneurs make the final choice**

 Nari Preneurship is a decision-support tool, not a decision-maker. Transparency and human oversight are built into every recommendation.

For the Entrepreneur

Moves from *"I can make this product, but I do not know if it can become a viable business"* to *"I know what to test, what it will cost, who may buy it, what evidence is missing and what I should do next."*

Scalability

System can serve **thousands of rural entrepreneurs across India** with minimal marginal cost. Mobile-first, regional-language-ready, deployable through NGOs, SHGs and government programs (NRLM, PMEGP).

Practical Requirements

Internet connectivity (or offline sync), mobile-first interface, regional language support (Hindi, Tamil, Telugu, Kannada +), and NGO/government partnerships for user acquisition and on-ground support.

Sustainability Model

Freemium: Basic analysis free; premium features (detailed market research, ongoing mentoring) at small fee. **B2B:** Licensing to NGOs and development organizations. **Partnerships:** Microfinance institutions and government entrepreneurship schemes.

Continuous Improvement

Entrepreneur feedback refines AI prompts and recommendations over time. Ecosystem integration connects users to verified lenders, suppliers, market platforms and training providers.
